ENABLED/DISABLED button – suspend the template swapping action.

X button – close the news panel.

How to use ?

- drag the indicator “NewsFilter” in the chart together with server speeder or FX blue auto restart (or other utility EA)
- this indicator will automatically get the news events from internet
- you can specify maximum five events (e.g. NFEC, CPI), and hours before & hours after to change the templates
- Or, you can provide news impact to change the template
- Special time/day session for your normal trade
- you need to provide two templates, one is used during the news events (close only), another is to restore after the news events (normal trade).
- you can apply filter so that only the particular currency chart & timeframe to apply the template
- Due to the source file limitation, we can get the news event weekly, you can only change the templates within a week (please note!!!)
